VMware Installation

Step 1 : Download the VMware software from the following link

https://www.vmware.com/products/workstation-pro/workstation-pro-evaluation.html

Download the software for windows. Good thing is that there is no signup process. Click and download begins. Software is around 260 MB.

Start Installing the software now, from the downloaded folder structure
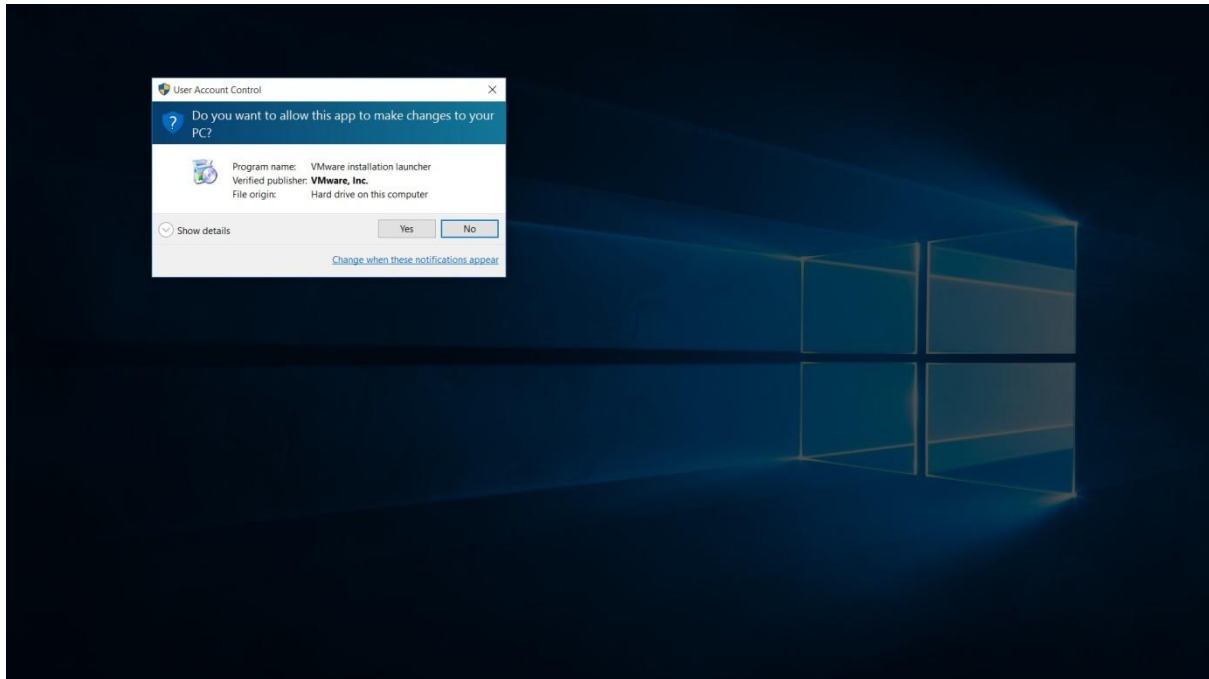

**Setup wizard dialog box should appear now.**

This time you should see End User Licence Agreement dialog box.

Check "I accept the terms in the Licence Agreement" box and press next to continue.

Select the folder in which you would like to install the application.

There is no harm in leaving the defaults as it is. Also select Enhanced Keyboard Driver check box.
Next you are asked to select "Check for Updates" and "Help improve VMware Workstation Pro".

Do as you wish. I normally leave it to a default that is unchecked.

Next step is to select the place you want the shortcut icons to be placed on your system to launch the application.

Please select both the options, desktop and start menu and click next.

**Now you see the begin installation dialog box.**

Click install to start the installation process.

Below screenshot shows Installation in progress. Wait for this to complete.

At the end you will see installation complete dialog box. Click finish and you are done with the installation process.

After the installation completes, you should see VMware Workstation icon on the desktop. Double click on it to launch the application.
